Note: Performance shown here and on the pages that follow for Orion, Och-Ziff and Tristan are largely impacted by the J-Curve effect, which illustrates the tendency of private real estate funds to deliver negative returns early in their investment periods as little income is generated and management fees are collected on committed (not invested) capital. We expect the impact of the J-Curve to be lessened as these funds mature and investments are realized. Strategy and vintage year diversification helps mitigate the impact of the J-Curve on portfolio returns for the aggregate real estate program.

Composite IRRS include all flows of the selected investments regardless of the start date of the investment. "N/A" will be displayed if the investment has insufficient cash flows for the period
